

More frequencies.
 More features.
 More reasons
 to update with Garmin.

Introducing the GTR/GNC series "smart" radios from Garmin. With the upcoming requirements for 8.33 kHz channel spacing in Europe, these new VHF comm and nav/comm radios offer the ideal path to compliance. They also boast a first-in-class frequency database – so you can easily look up the frequencies for a given airport (Tower, Ground, ATIS, Clearance Delivery, etc.) just by entering the identifier. The display will translate and identify the frequencies you select, to verify who you're talking to! And other highlights include a choice of 10- or 16-watt transmitters – plus many more features.

To learn more, visit Garmin.com or see your Garmin dealer.
